

TABLE OF CONTENTS

TABLE OF CONTENTS	I
ACKNOWLEDGEMENTS	VII
PREFACE	IX
CHAPTER 0. BACKGROUND AND SCOPE	1
0.1 MICROCONTROLLERS AND EMBEDDED CONTROL	1
0.2 NETWORKING	2
0.3 THE SCOPE OF THIS BOOK	3
0.4 THE DEVELOPMENT SYSTEM	4
0.5 PREREQUISITES	5
0.6 REVIEW QUESTIONS AND EXTENSIONS	6
0.7 REFERENCES	6
CHAPTER 1. NETWORKS AND THE INTERNET	7
1.1 TYPES OF NETWORKS	7
1.1.1 The physical architecture or connectivity geometry of a network	8
1.1.2 The hierarchy of nodes on a network.....	9
1.1.3 The physical media that is modulated to carry the information	11
1.1.4 The dynamic characteristics and elements of the signals	12
1.1.5 Network access conditions, node addressing; collision detection, avoidance, and recovery	12
1.2 NETWORK MODELS	14
1.2.1 The OSI network reference model.....	14
1.2.2 A specific example.....	16
1.3 THE INTERNET	24
1.3.1 The structure of the Internet.....	24
1.3.2 The protocols of the Internet.....	25
1.3.3 The benefits of Internet connectivity for eight-bit microcontrollers.....	26
1.3.4 Ethernet, a choice for LANs.....	27
1.3.5 Ethernet frame structure	28
1.3.6 Ethernet addresses.....	30
1.4 REVIEW QUESTIONS AND EXTENSIONS.....	30
1.5 REFERENCES	31

CHAPTER 2. CONNECTING AN ETHERNET DRIVER TO THE 8051 ...	33
2.1 ETHERNET DRIVERS AND THE CS8900A	33
2.1.1 Interfacing the CS8900A to the microcontroller.....	34
2.1.2 Operating the CS8900A.....	39
2.1.3 Ethernet functions	55
2.2 A SIMPLE ETHERNET COMMUNICATIONS EXPERIMENT	57
2.3 INSPECTING ETHERNET FRAMES.....	59
2.4 EXPERIMENTS.....	62
2.5 REVIEW QUESTIONS AND EXTENSIONS.....	62
2.6 REFERENCES.....	63
CHAPTER 3. IP ADDRESSING AND THE ADDRESS RESOLUTION PROTOCOL.....	65
3.1 CLASSES OF IP ADDRESSES	66
3.1.1 Special IP addresses	67
3.2 REACHING A NODE WITH A GIVEN IP ADDRESS	71
3.2.1 Reaching an IP address on the same LAN	71
3.2.2 Running the ARP program on the board.....	79
3.2.3 Reaching an IP address on a different LAN	83
3.3 EXPERIMENTS.....	85
3.4 REVIEW QUESTIONS AND EXTENSIONS.....	85
3.5 REFERENCES.....	85
CHAPTER 4. THE INTERNET PROTOCOL	87
4.1 THE IP DATAGRAM	87
4.1.1 Receiving IP datagrams.....	90
4.1.2 Transmitting IP datagrams	90
4.1.3 A simple experiment to inspect IP datagrams	93
4.2 IP PROTOCOLS	97
4.2.1 ICMP echo request and response	99
4.2.2 ICMP echo request frame structure	99
4.2.3 The ping utility.....	100
4.2.4 Implementing ICMP echo responses.....	102
4.2.5 How switches and hubs deal with Ethernet frames	105
4.2.6 Running the ICMP functions on the 8051 board.....	105
4.2.7 Streamlining the ICMP functions.....	111
4.3 EXPERIMENTS.....	119
4.4 REVIEW QUESTIONS AND EXTENSIONS.....	119
4.5 REFERENCES.....	119

CHAPTER 5. THE USER DATAGRAM PROTOCOL	121
5.1 THE STRUCTURE OF UDP	121
5.1.1 Ports and sockets	122
5.2 UDP COMMUNICATIONS FUNCTIONS	123
5.2.1 Receiving UDP messages	123
5.2.2 Transmitting UDP messages	125
5.2.3 A simple experiment	126
5.2.4 The remote control experiment revisited	128
5.3 UDP/IP AND THE OSI REFERENCE MODEL.....	130
5.3.1 Combining the code in a library	134
5.4 EXPERIMENTS.....	135
5.5 REVIEW QUESTIONS AND EXTENSIONS.....	135
5.6 REFERENCES	135
CHAPTER 6. UDP/IP-BASED CONTROL APPLICATIONS.....	137
6.1 COMMAND STRINGS	137
6.2 COMMUNICATING WITH THE BOARD.....	140
6.2.1 The Netcat utility.....	140
6.2.2 The RitaBrowser utility	141
6.2.3 Python	141
6.3 USING A WEB BROWSER TO COMMUNICATE WITH THE BOARD	142
6.4 SNMP	143
6.5 EXPERIMENTS.....	144
6.6 REVIEW QUESTIONS AND EXTENSIONS.....	144
6.7 REFERENCES	145
CHAPTER 7. THE TRANSFER CONTROL PROTOCOL.....	147
7.1 THE STRUCTURE OF TCP.....	148
7.2 TCP STATES AND TRANSITIONS	150
7.3 TCP SOCKETS.....	153
7.4 THE SEQUENCE AND ACKNOWLEDGE NUMBERS	154
7.5 ESTABLISHING A TCP CONNECTION	157
7.6 MAINTAINING A TCP CONNECTION	159
7.7 TERMINATING A TCP CONNECTION	160
7.8 HANDLING TCP MESSAGES.....	161
7.8.1 Overview of TCP functions	163
7.8.2 TCP variables.....	165
7.8.3 The implementation of Tcp()	166
7.8.4 Defensive TCP messaging	180
7.9 A TCP COMMUNICATIONS EXPERIMENT.....	180
7.9.1 The main() function	181

7.9.2 The support functions	183
7.10 COMMAND STRINGS OVER TCP.....	185
7.11 EXPERIMENTS.....	186
7.12 REVIEW QUESTIONS AND EXTENSIONS	186
7.13 REFERENCES	187
CHAPTER 8. TCP/IP-BASED CONTROL APPLICATIONS.....	189
8.1 HTTP AND HTML	190
8.1.1 HTTP requests	191
8.1.2 HTTP responses	195
8.2 A MINIMAL WEB SERVER	196
8.2.1 Implementing the minimal web server.....	197
8.3 BUTTONS AND LINKS ON A WEB PAGE	203
8.3.1 The code.....	206
8.4 EXPERIMENTS.....	211
8.5 REVIEW QUESTIONS AND EXTENSIONS.....	212
8.6 REFERENCES.....	212
CHAPTER 9. ARP TABLES	213
9.1 SENDING UNSOLICITED MESSAGES.....	213
9.2 THE RITA APPROACH	214
9.3 IMPLEMENTING THE ARP TABLE.....	215
9.3.1 Format of the ARP table	216
9.3.2 ARP table functions.....	217
9.3.3 Testing the code	223
9.4 USING ARP TABLES IN UDP AND TCP APPLICATIONS.....	225
9.5 USING A LIBRARY WITH ARP TABLE SUPPORT FOR UDP AND TCP APPLICATIONS.....	228
9.6 EXPERIMENTS.....	229
9.7 REVIEW QUESTIONS AND EXTENSIONS.....	229
CHAPTER 10. CONCLUSIONS AND REVIEW	231
APPENDIX A. REQUEST FOR COMMENTS	237
APPENDIX B. THE DEVELOPMENT SYSTEM	239
B.1 THE READS51 IDE.....	239
B.2 THE RITA-51J	239
B.2.1 Using the Rita-51J in the experiments	239
B.3 THE ETHERNET CONNECTION	240
B.3.1 Direct connection to the board	240
B.3.2 Using a Ethernet hub or switch.....	240

APPENDIX C. OTHER MCS-51/INTERNET SOURCES.....	243
C.1 8051s WITH ON-CHIP ETHERNET CONTROLLERS	243
C.2 SOFTWARE VENDORS.....	243
INDEX	245

ACKNOWLEDGEMENTS

We acknowledge the many engineers at Intel, Dallas Semiconductor, Atmel, and Cirrus Logic for their continuing support.

The encouragement and constructive criticism from Professors Eginhard Muth, Serdar Kirli, Ray Bucklin, and John Schueller were instrumental in guiding the scope and direction of the book.

We would like to thank Mr. Jon Lewis of Lewis.org and Atlantic.net for his help in debugging the various Internet protocols.

Most importantly, however, we are grateful to all our students who were subject to the earlier (not-so-refined) versions of this material. We especially would like to thank Mr. Joshua Tompkins for contributing the Python code, and Ms. Karyn Hall for contributing the password-protected web server example. We acknowledge Mr. Vadim Tymianski and Ms. Karyn Hall for their valuable comments to the earlier manuscript.
